HAZARD ANALYSIS CRITICAL CONTROL POINT (HACCP)

Cleaning and Sanitizing Food Contact Surfaces

WHEN TO CLEAN & SANITIZE FOOD CONTACT SURFACES
- Wash, rinse, and sanitize food contact surfaces of sinks, tables, equipment, utensils, thermometers, carts, and equipment:
  - Before each use.
  - Between uses when preparing different types of raw animal foods, such as eggs, fish, meat, and poultry.
  - Between uses when preparing ready-to-eat foods and raw animal foods, such as eggs, fish, meat, and poultry.
  - Any time contamination occurs or is suspected.

HOW TO CLEAN & SANITIZE FOOD CONTACT SURFACES
- Wash, rinse, and sanitize food contact surfaces of sinks, tables, equipment, utensils, thermometers, carts, and equipment using the following procedure:
  - Wash surface with detergent solution.
  - Rinse surface with clean water.
  - Sanitize surface using a sanitizing solution mixed at a concentration specified on the manufacturer’s label.
  - Place wet items in a manner to allow air drying.
- If a 3-compartment sink is used, setup and use the sink in the following manner:
  - In the first compartment, wash with a clean detergent solution at or above 110°F or at the temperature specified by the detergent manufacturer.
  - In the second compartment, rinse with clean water.
  - In the third compartment, sanitize with a sanitizing solution mixed at a concentration specified on the manufacturer’s label at or above 75°F for 1 minute, or by immersing in hot water at or above 170°F for 30 seconds. Test the chemical sanitizer concentration by using an appropriate test kit.
- If a dish machine is used:
  - Check with the dish machine manufacturer to verify that the information on the data plate is correct.
  - Refer to the information on the data plate for determining wash, rinse, and sanitization (final) rinse temperatures; sanitizing solution concentrations; and water pressures, if applicable.
  - Follow manufacturer’s instructions for use.
  - Ensure that food contact surfaces reach the surface temperature specified on the data plate for each load of dishes.
MONITORING

- During all hours of operation, visually and physically inspect food contact surfaces of equipment and utensils to ensure that the surfaces are clean.
- In a **3-compartment sink**, on a daily basis:
  - Visually monitor that the water in each compartment is clean.
  - Take the water temperature in the first compartment of the sink by using a calibrated thermometer.
  - If using chemicals to sanitize, test the sanitizer concentration by using the appropriate test kit for the chemical.
  - If using hot water to sanitize, use a calibrated thermometer to measure the water temperature.
- In a **dish machine**, on a daily basis:
  - Visually monitor that the water and the interior parts of the machine are clean and free of debris.
  - Continually monitor the temperature and pressure gauges, if applicable, to ensure that the machine is operating according to the data plate.
  - For hot water sanitizing dish machine, ensure that food contact surfaces are reaching the appropriate temperature by placing a maximum registering thermometer on a rack and running the item or rack through the dish machine.
  - For chemical sanitizing dish machine, check the sanitizer concentration on a recently washed food-contact surface using an appropriate test kit.
  - If the proper sanitizer concentration level is not achieved, stop using the machine and contact the appropriate individual(s) to have it repaired. Use a 3-compartment sink to wash, rinse, and sanitize until the machine is repaired.
- Discard food that comes in contact with food contact surfaces that have not been sanitized properly.
